TRUCK DRIVE-THRU CENTRE

Bring your truck and trailer to our Truck-Drive Thru Centre, in Wadeville, where we will perform a thorough tyre, wheel and suspension inspection. We offer a one-stop-shop solution where downtime is reduced by attending to all tyre and suspension related problems.

We attend to puncture repairs, valve extensions and valve cap replacement, which are all pertinent to maintaining the correct pressure in your tyres. If you require tyres, we have a wide range of new and retreaded tyres to choose from. After fitment, we offer highly accurate computerised wheel alignment with a report provided of the work done.

In addition we offer repair and modification services for exhaust, electrical and air systems. Wheel lock nut supply and fitment and anti-syphon device fitment are also available as safeguards against theft.

If you can't afford having your driver off the road, you can book your trailer in for servicing at our Truck Drive-Thru Centre and we will collect and deliver it back to you.

OUR SERVICES

- Wheel alignment and balancing
- Exhausts repair, modification or replacement
- Fifth wheel service or replacement
- Anti-Syphon devices
- New or retread tyres
- Puncture repairs
- Suspension components (details overleaf)
- New or refurbished rims

SUSPENSION MATTERS

Fitting tyres to your truck or trailer without repairing worn or damaged suspension parts could result in dramatically reduced tyre life. Your wheels will start to track incorrectly directly after fitment, causing your tyres to exhibit symptoms such as cupping or feathering, and diagonal and camber wear.

We recommend attending to any suspension related problems as soon as they are found to avoid costly tyre damage and wear.
